About the Mathematics in this Unit

Dear Family,

Our class is starting the year with a mathematics unit called *Counting People, Sorting Buttons* from the *Investigations 3* Curriculum. This unit serves as an introduction to some of the mathematical routines students will do all year.

These routines include:

- Counting to take attendance
- Using the calendar to count days and to keep track of time and events
- Counting and recording the number of objects in a jar, and creating a set with the same number
- Counting and analyzing data about our class, such as how many students do (and do not) have a younger sibling

In addition, students are introduced to the manipulatives they will use in mathematics this year and to routines for using and taking care of such materials.

In this unit, students also use these materials to begin to work on sorting and counting. For example, they carefully examine a button and then look for attributes that some buttons have in common.

NAME _____

DATE _____

(PAGE 2 OF 2)

About the Mathematics in this Unit

Throughout this unit, students will be working toward these goals:

- Becoming familiar with the expectations for learning
- Exploring some of the materials they will be using to model mathematical situations and to solve mathematical problems
- Talking about mathematical problems and solutions
- Working with peers as they share ideas and materials
- Relying on their own thinking and learning from the thinking of others

In our math class, students engage in math problems and activities and discuss the underlying concepts. They are asked to share their reasoning and solutions. It is important that children solve math problems accurately in ways that make sense to them. At home, encourage your child to explain his or her math thinking to you.

In the coming weeks, you'll receive more information about this unit as well as activities to do at home.

Related Activities to Try at Home

Dear Family,

The activities suggested below are related to the mathematics we are currently studying in school. Doing them together can enrich your child's mathematical learning.

Calendar Explore the calendar as a tool for keeping track of time and events by showing your child how you use it. When you write in an appointment or a family event, or when you use it to find how many more days until a special event, talk with your child about what you're doing.

Describing Encourage your child to describe the physical features of objects and to think about how objects are alike or different. For example:

- How would you describe this ball? (e.g., red, round, big)
- How is the ball the same as this box? (They are both red.)
- How are they different? (The ball is round, but the box is square, or the box is small.)

Also, encourage your child to use words to describe where a picture or object is in relation to another (e.g., next to, near, under, over, below, above).

NAME _____

DATE _____

(PAGE 2 OF 2)

Related Activities to Try at Home

Counting Take advantage of any opportunities to count with your child. Children learn to count accurately by having many opportunities to see and hear other people count and to count on their own. You can model this by:

- Counting out napkins or plates for the table
- Counting the number of stairs as you go up or down
- Counting the number of a particular object (e.g., dogs, signs, or cars) as you walk down the street
- Counting the number of items in a collection of plastic animals, cars, or other small toys

Sorting If you have a button (or other) collection, you and your child could talk about different ways to sort the buttons. Your child might like to teach you *Button Match-Up*. In this game, one player chooses a button, and then both players work together to find buttons that have one thing that is the same. For example, any button with two holes matches this button, as does any button that is black, small, or plastic.

Math and Literature You can find the following books in your local library and read them together.

Aber, Linda Williams. *Grandma's Button Box*.

Emberley, Rebecca. *My Numbers (Mis Numeros)*.

Falwell, Cathryn. *Feast for 10*.

Gayzagian, Doris. *One White Wishing Stone: A Beach Day Counting Book*.

Mariconda, Barbara. *Sort it Out!*

Martin, Bill. *Chicka Chicka 1, 2, 3*.

Otoshi, Kathryn. *Zero*.

Roth, Susan L. *My Love for You All Year Round*.

Walsh, Ellen Stoll. *Mouse Count*.

Wormell, Christopher. *Teeth, Tails, and Tentacles*.

About the Mathematics in this Unit

Dear Family,

Our class is starting a new unit in mathematics called *Counting Quantities, Comparing Lengths*. The focus of this unit is on counting and comparing quantities and beginning to explore measurement by directly comparing objects to see which is longer.

Throughout this unit, students will be working toward these goals:

BENCHMARKS/GOALS	EXAMPLES
Count and count out a set of up to 10 objects.	<p>How many buttons are there?</p>  <p>“Can you count out 8 pencils?”</p>
Describe length and decide which of two objects is longer.	<p>Which is longer?</p> 

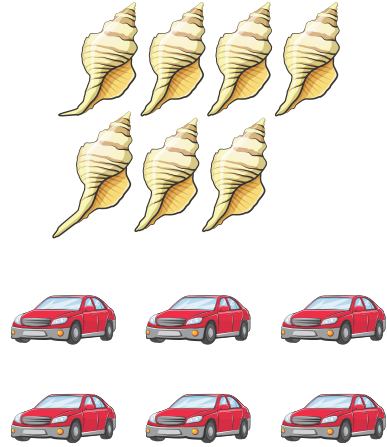

NAME _____

DATE _____

(PAGE 2 OF 2)

About the Mathematics in this Unit

BENCHMARKS/GOALS	EXAMPLES
Compare two quantities up to 10 to determine which is greater.	<p data-bbox="568 428 887 495">Are there more cars or shells?</p>  <p>The illustration shows two groups of objects for comparison. The top group consists of 7 seashells arranged in two rows: the first row has 4 shells and the second row has 3 shells. The bottom group consists of 6 red cars arranged in two rows: the first row has 3 cars and the second row has 3 cars.</p>

In our math class, students engage in math problems and activities and discuss the underlying concepts. They are asked to share their reasoning and solutions. It is important that children solve math problems accurately in ways that make sense to them. At home, encourage your child to explain his or her math thinking to you.

In the coming weeks you will receive more information about this unit as well as suggestions for activities to do at home.

NAME _____

(PAGE 1 OF 2)

Related Activities to Try at Home

Dear Family,

The activities suggested below are related to the mathematics we are currently studying in school. Doing them together can enrich your child’s mathematical learning.

Counting A major focus of this unit is counting. You can help your child learn to count fluently by finding many opportunities to ask your child to count in different ways. For example, sometimes count aloud together and see how high you can count. At other times, ask your child to count a small set of objects (“How many books are on the table?”) or the number of pictures on a page. A slightly different kind of question is “Can you make a group of 6 blocks?” or “Can you count out 7 pennies?” You can also ask your child to count to solve a problem; for example, “If everyone needs a fork, how many forks do we need to set the table?”

Grab and Count Gather a set of objects, such as toy cars, blocks, or foam peanuts. Ask your child to grab a handful and count how many he or she grabbed. Then, ask your child to predict whether you will be able to grab more or less. Try it and find out. Your child can also grab two handfuls and see which holds more, the left hand or the right.

NAME _____

DATE _____

(PAGE 2 OF 2)

Related Activities

Which Is Longer? Another major focus of this unit is comparing objects to see which is longer. Find opportunities to ask your child about the length of different objects; for example, “What do you think the longest part of this cereal box is? Do you think the cereal box is longer than the milk carton? How could we find out?”

Playing *Compare* We have been playing a card game called *Compare* that is similar to the familiar card game, *War*. You could play at home with a deck of playing cards. Each player gets half of a deck of cards and puts them in a pile facedown. Both players turn over their top card, and the person with the greater number says, “Me.” Ask your child to explain how he or she knows which number is greater. The game is over when all of the cards have been turned over.

Math and Literature You can find the following counting books in your local library and read them together. Ask your child to count the objects on each page, and see what mathematical concepts your child discovers.

- Bowman, Anne. *Count Them While You Can...: A Book of Endangered Animals.*
- Gayzagian, Doris. *One White Wishing Stone: A Beach Day Counting Book.*
- Krebs, Laurie. *We All Went on Safari: A Counting Journey Through Tanzania.*
- Mora, Pat. *Uno, Dos, Tres: One, Two, Three.*
- Martin, Bill. *Chicka Chicka 1, 2, 3.*
- Wormell, Christopher. *Teeth, Tails, and Tentacles.*

About the Mathematics in This Unit

Dear Family,

We are beginning a new unit in mathematics called *Make a Shape, Fill a Hexagon*. This geometry unit focuses on two-dimensional shapes. In this unit, students look for and identify two-dimensional shapes in their environment and make a Class Book of Shapes and a Shape Mural using geometric shapes to depict the objects they see. They look carefully at the attributes of shapes as they describe, identify, compare, construct, and represent 2-D shapes. Students also combine shapes to make new shapes (e.g., 2 trapezoids make a hexagon).

Throughout this unit, students will be working toward these goals:

Benchmarks/Goals	Examples
Identify and describe the overall size, shape, and features of familiar 2-D shapes.	<p>“It has a triangle on one side.”</p> <p>“It’s big.”</p> <p>“It would make a good ramp.”</p>  <p>“It looks like a piece of pie.”</p> <p>“One part is pointy.”</p>
Make 2-D shapes.

Related Activities to Try at Home

Dear Family,

The activities below are related to the mathematics in the geometry unit *Make a Shape, Fill a Hexagon*. Doing them at home together with your child can enrich your child's mathematical learning.

Shape Hunt Shapes are everywhere. Talk with your child about the shapes you see every day. Together, you can look at everything from the shapes of buildings in your neighborhood to the shapes of boxes and cans in the supermarket. Sometimes you can include descriptions of shapes in what you say. For example, "Look at that part of the building shaped like a trapezoid." At other times, you can ask your child to look for specific shapes: "See how many things you can find that are triangles, while we walk down the street."

Making Shapes Making shapes is a great way to learn about them. At home, your child might use clay, drinking straws, or a loop of yarn or rope to make different shapes.

Ask your child, "Can you make a shape with three sides? . . . Do you know what that shape is called?" Or, you can make different shapes and ask your child to name and describe them.

NAME _____

DATE _____

(PAGE 2 OF 2)

Related Activities to Try at Home

Drawing Shapes Drawing shapes is also fun. In class we have been making a class book of shapes and a shape mural. Your child might like to design his or her own shape book, picture, or mural using many different shapes that he or she has drawn or cut from old magazines.

Seeing Shapes Inside Shapes Encourage your child to look for patterns or designs made from different shapes. For example, ask: “Can you find squares on the floor (or wallpaper or clothing)?” or “Are there any patterns made from triangles?” or “Do you see any hexagons?”

Math and Literature Here are some suggestions of children’s books that contain relevant ideas about geometry. Read them together and talk about the shapes you find.

Blackstone, Stella. *Ship Shapes*.

Burns, Marilyn. *The Greedy Triangle*.

Dodds, Dayle Ann. *The Shape of Things*.

MacDonald, Suse. *Shape by Shape*.

Onyefulu, Ifeoma. *A Triangle for Adaora: An African Book of Shapes*.

Schachner, Judy. *Skippyjon Jones Shape Up*.

About the Mathematics in This Unit

Dear Family,

Our class is starting a new unit in mathematics called *Collect, Count, and Measure*. The focus of this unit is on counting and measuring. Students line up craft sticks or cubes to measure the length of objects, including the length of their shoes. They develop visual images for quantities up to 10 as they roll dot cubes, work with Ten Frames, and find many different ways to arrange and describe a set of 5 to 10 tiles.

Students count and compare quantities throughout this unit. These activities support students as they make connections between counting and combining, which helps them begin to add and subtract small numbers. For example, they solve simple story problems and play games that ask them to figure out the total when 1, 2, and 3 are added or when 1 is taken away.

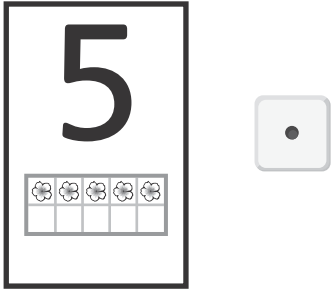

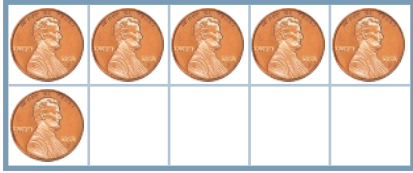

NAME _____

(PAGE 1 OF 2)

Related Activities to Try at Home

Dear Family,

The activities suggested below are related to the mathematics we are currently studying in school. Doing them with your child can enrich your child's mathematical learning.

Measuring Shoes In school, we have been using cubes to measure the length of our shoes. Your child may enjoy investigating the length of shoes at home. Just as we do in school, your child can trace shoe outlines on paper, and then use paper clips (or another same-sized item such as blocks or toothpicks) to measure the length of the outline. Ask your child to put the shoe lengths in order from the shortest to the longest.

Counting We continue to focus on strategies for counting accurately. At home, find many ways to count together with your child; for example, count aloud, count sets of objects, ask your child to count out specific amounts, and pose problems that he or she can solve by counting. The list of suggested books below includes several counting books that you can read together.

One More or Less Find opportunities to ask your child about one more and one less, an idea we have been working on in class. For example, after your child counts a set of objects such as pennies, ask, "What if I gave you one more penny? Then how many would you have?" or "What if I took one penny back? Then how many would you have?" Then, add (or remove) a penny. That way, your child can recount the set from one to find out or to double-check the answer.

Many counting books that count up from one (i.e., from 1 to 10) present situations of "one more"; books that count back (i.e., from 10 to 1) present situations of "one less." (See list of books.)

About the Mathematics in This Unit

Dear Family,

We are beginning a new unit in mathematics called *Build a Block, Build a Wall*. This geometry unit focuses on three-dimensional shapes. In this unit, students look for and identify three-dimensional shapes in the real-world as they go on Shape Hunts in school and at home. They create, identify, describe, compare, represent, and build with 3-D shapes. They also explore the relationship between 2-D and 3-D shapes as they match the faces of Geoblocks—a set of related three-dimensional wooden blocks—to corresponding 2-D shapes.

Throughout this unit, students will be working toward these goals:

Benchmarks/Goals	Examples
Understand words that describe relative position.	<ul style="list-style-type: none"> • above • on top of • below • beneath • beside • next to • in front of • behind
Identify and describe the overall size, shape, and features of familiar 3-D shapes.	<p>“It has a triangle on one side.”</p> <p>“It’s big.”</p> <p>“It would make a good ramp.”</p>  <p>“It looks like a piece of pie.”</p> <p>“One part is pointy.”</p>
Make 3-D shapes.	
Combine shapes to make 3-D shapes.

About the Mathematics in This Unit

Dear Family,

Our class is starting a new unit in mathematics called *How Many Now?* The focus of this unit is on combinations, counting, and addition and subtraction. Students record different ways a set of two-color counters can land, figure out how many blue and red crayons could be in a set of five crayons, and play a card game in which they look for combinations of cards that total six. All of these activities focus on the idea that one number can be broken apart in many ways: 6 is 3 and 3 or 5 and 1 or 2 and 2 and 2. Students also count sets of up to 20 objects, and continue making sense of addition and subtraction through story problems and games that ask them to combine or separate small amounts.

Throughout this unit, students will be working toward these goals:

Benchmarks/Goals	Examples				
Count and count out a set of up to 20 objects.	<p>How many pennies are there?</p>  <p>Can you make a tower with 20 cubes?</p>				
Write the numbers to 10.	<p>How many are red? How many are yellow?</p>  <table border="1"> <thead> <tr> <th>Red</th> <th>Yellow</th> </tr> </thead> <tbody> <tr> <td>2</td> <td>4</td> </tr> </tbody> </table>	Red	Yellow	2	4
Red	Yellow				
2	4				

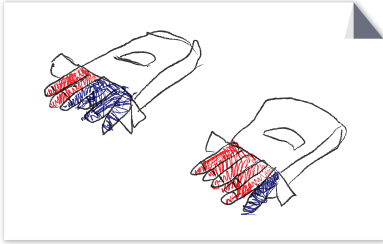

NAME _____

Benchmarks/Goals	Examples
<p>Represent and solve addition problems within 10.</p>	<p>How many counters should Mia take?</p>  $\underline{3} + \underline{4} = 7$ <p>Jack had 6 blocks. Carmen gave him 2 more. How many blocks did Jack have then?</p> 
<p>Decompose a number into two addends in more than one way.</p>	<p>I have 6 crayons in all. Some are red and some are blue. How many of each could I have? How many blues? How many reds?</p>  <p>4 blue 2 red 1 blue 5 red</p>

In our math class, students engage in math problems and activities and discuss the underlying concepts. They are asked to share their reasoning and solutions. It is important that children solve math problems accurately in ways that make sense to them. At home, encourage your child to explain his or her math thinking to you.

In the coming weeks, you will receive information about activities to do at home.

NAME

DATE

(PAGE 1 OF 2)

Related Activities to Try at Home

Dear Family,

The activities suggested below are related to the mathematics we are currently studying in school. Doing them with your child can enrich your child's mathematical learning.

Counting We continue to focus on strategies for counting accurately and are practicing counting sets of up to 20 objects. This is more challenging because there are more objects to keep track of, but also because the number sequence in the teens doesn't follow the same pattern as the rest of the numbers. For example, think about 21, 22, 23 (or 31, 32, 33 or 41, 42, 43), and then consider the fact that we don't say ten-one, ten-two, ten-three for 11, 12, 13. You can support your child by finding lots of ways to count together at home.

Solving Story Problems In this unit, students have many opportunities to solve problems about combining (addition) and separating (subtraction) small amounts. At home, find ways to present problems about common situations: "There are six people in our family. But Grandma and Grandpa are joining us for dinner tonight. How many people will there be?". Or, "Usually, we have six people at our dinner table, but José is eating at a friend's house. How many people will there be?". Or, "If James wants three tacos, and Maria wants four, how many tacos do I need to make?". Encourage children to explain how they solve such problems. Most kindergarteners count from one. Some may count on (or back) or "just know" some combinations.

NAME _____

(PAGE 2 OF 2)

Related Activities to Try at Home

Playing Double Compare We have been playing *Double Compare* with all of the cards from 0 to 10. You could play at home with a deck of playing cards. Each player gets half the deck. Both players turn over their top two cards, and the person with the greater total says “me.” The game is over when all of the cards have been turned over. Be sure to ask your child to explain how she or he knows which number is greater. You might be surprised—although many children count or add to find and compare the totals, some children do not. Instead they reason about the numbers:

“I have 6 and 3. You have 6 and 5. We both have 6, so you have more because 5 is more than 3.”

“Both of my numbers are bigger than both of yours. So I have more.”

Or, “I have 2 big numbers, and you have 2 small numbers. I have more.”

Math and Literature You can find these books in your local library and read them together. These books focus on measuring, counting forward, and counting back:

Bang, Molly. *Ten, Nine, Eight*.

Dale, Penny. *Ten in the Bed*.

Bowman, Anne. *Count Them While you Can...: A Book of Endangered Animals*.

Deitz Shea, Pegi, Cynthia Weill, and Pahn Viet-Dinh. *Ten Mice for Tet!*

Heo, Yeumi. *Ten Days and Nine Nights: An Adoption Story*.

Martin, Bill. *Chicka Chicka 1, 2, 3*.

Metropolitan Museum of Art. *Museum 123*.

Sayre, April Pulley and Sayre, Jeff. *One is a Snail, Ten is a Crab*.

Related Activities to Try at Home

Dear Family,

The activities suggested below are related to the mathematics we are currently studying in school. Doing them with your child can enrich your child's mathematical learning.

Sorting Your child can sort collections of objects you have at home: coins, stamps, toys, containers, even laundry. He or she can sort just for fun or to organize some things in your home. As your child sorts a collection, ask him or her questions, such as: "How are some of the buttons the same? How could you sort them into groups? What is the same about all of these? Is there a different way you could sort them?" Your child can also count the number of items in each group and compare the totals.

Surveys In this unit, students conduct their own surveys. Help your child take a survey of your family, friends, or neighbors. Your child can choose a question that is of interest to him or her, create a sheet to record people's responses, ask people the question, and then record their responses. Afterward, ask your child some questions about the results of the survey. For example, ask: "What did you find out? How many people said they liked the ocean? How many people didn't like the ocean? Did more people like the ocean than did not? Were you surprised by people's responses?"

Counting to Collect Data You can encourage your child to collect data about the number of certain items in your home: How many forks are there? How many windows? How many chairs? How many doors?

(PAGE 1 OF 2)

About the Mathematics in This Unit

Dear Family,

Our class is starting a new unit in mathematics called *Ten Frames and Teen Numbers*. The focus of this unit is on understanding and solving addition and subtraction problems in a variety of contexts (i.e., games, activities, story problems), recording and representing solutions on paper, making sense of the teen numbers (10–19) as a group of ten ones and some number of leftovers, and counting by 1s and 10s to 100.

Students solve story problems and discuss and compare their solution strategies with classmates. They practice counting by 10s as they count the number of fingers on 10 students. They play games where the cards that indicate how far to move (or how many to take) have “facts” on them, so that students develop fluency adding and subtracting within 5 (e.g., $3 + 2$ and $4 - 1$). They also work on a variety of activities that involve number combinations focusing specifically on combinations that make ten and on the teen numbers.

Throughout this unit, students will be working toward these goals:

Benchmarks/Goals	Examples
Represent and solve subtraction story problems within 10.	There are 6 birds in a tree. Two birds flew away. How many birds are left in the tree?
Count by 1s up to 100, starting from any number. Count by 10s to 100.	<p style="text-align: center;">start with get to</p>  <p style="text-align: center;">80 82 84 86 88 90 92 94 96 98 100 102 104</p> <p style="text-align: center;">“85, 86, 87, ..., 100!”</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">10 </div> <div style="text-align: center;">20 </div> <div style="text-align: center;">30 </div> <div style="text-align: center;">40 </div> <div style="text-align: center;">50 </div> </div> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">60 </div> <div style="text-align: center;">70 </div> <div style="text-align: center;">80 </div> <div style="text-align: center;">90 </div> <div style="text-align: center;">100 </div> </div> <p style="text-align: center;">“10, 20, 30, 40, ..., 100!”</p>

About the Mathematics in This Unit

Benchmarks/Goals	Examples																																																																						
Add and subtract fluently within 5.	$\boxed{2+3} \quad \boxed{5-1}$																																																																						
Given a number, figure out what number to add to make a total of 10.	 $3 + \boxed{7} = 10$																																																																						
Write the numbers to 20.	<table border="1" style="border-collapse: collapse; text-align: center;"> <tr><td></td><td></td><td></td><td>13</td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td>13</td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td>13</td><td></td><td></td><td></td><td>17</td><td></td><td></td></tr> <tr><td></td><td></td><td>12</td><td>13</td><td></td><td>15</td><td></td><td>17</td><td></td><td></td></tr> <tr><td>10</td><td></td><td>12</td><td>13</td><td>14</td><td>15</td><td></td><td>17</td><td>18</td><td>19</td></tr> <tr><td>10</td><td>11</td><td>12</td><td>13</td><td>14</td><td>15</td><td>16</td><td>17</td><td>18</td><td>19</td></tr> <tr><td>10+0</td><td>10+1</td><td>10+2</td><td>10+3</td><td>10+4</td><td>10+5</td><td>10+6</td><td>10+7</td><td>10+8</td><td>10+9</td></tr> </table>				13										13										13				17					12	13		15		17			10		12	13	14	15		17	18	19	10	11	12	13	14	15	16	17	18	19	10+0	10+1	10+2	10+3	10+4	10+5	10+6	10+7	10+8	10+9
			13																																																																				
			13																																																																				
			13				17																																																																
		12	13		15		17																																																																
10		12	13	14	15		17	18	19																																																														
10	11	12	13	14	15	16	17	18	19																																																														
10+0	10+1	10+2	10+3	10+4	10+5	10+6	10+7	10+8	10+9																																																														
Show that the teen numbers are made up of 10 ones and some leftover ones.	 $10 + 3 = 13$																																																																						

In our math class, students engage in math problems and activities and discuss the underlying concepts. They are asked to share their reasoning and solutions. It is important that children solve math problems accurately in ways that make sense to them. At home, encourage your child to explain his or her math thinking to you.

In the coming weeks, you will receive information about activities to do at home.

Related Activities to Do at Home

Dear Family,

The activities suggested below are related to the mathematics we are currently studying in school. Doing them with your child can enrich your child's mathematical learning.

Counting While we continue to focus on strategies for counting a set of 20 objects accurately, we are also practicing the rote counting sequence with larger numbers. As a class, we often count aloud from one number to another. For example, we might start at 40 and count to 55. Find opportunities to count aloud together, letting your child pick the starting and ending numbers. In addition to counting by ones, we have begun to learn the counting by 10s sequence. You can also practice counting together by 10s to 100.

Addition and Subtraction We've been solving addition and subtraction problems, and thinking about strategies for solving subtraction problems. Find ways to present problems about common situations: "Usually, we have five people at our dinner table, but Maria is eating at a friend's house. How many people will there be?" Or, "There were six cookies, but Joe took two for snack. How many are left?" Encourage children to explain how they solve such problems. Most kindergarteners show the starting amount with counters or on their fingers, remove the amount that is taken away, and then count how many are left. Some may count back or "just know" some answers.

Combinations of 10 Ten is an important number in our number system, so we've been thinking about how to make 10. For example, how many dots are there? How many more do you need to have 10?

You can play a similar game with your fingers. Display a number of fingers, and ask, "How many to 10?" Students can represent and solve such problems on their fingers.

Related Activities to Do at Home

Measuring Weight We've been comparing objects to see which is heavier. Find opportunities to ask your child about the weight of different objects. For example, "What do you think is heavier, the milk carton or the cereal box? Why do you think so?" Encourage your child to hold one item in each hand to feel which weighs more.

Math and Literature You can find these books in your local library and read them together. These books focus on *counting and measuring*:

Kroll, Virginia. *Equal Shmequal*.

Murphy, Stuart J. *Leaping Lizards*.

Sayre, April, and Sayre, Jeff. *One is a Snail, Ten is a Crab*.

Slater, Teddy. *98, 99, 100! Ready or Not, Here I Come!*

Viggers, Katie. *1 to 20, Animals Aplenty*.

Walsh, Ellen Stoll. *Balancing Act*.

Yektai, Niki. *Bears at the Beach Counting 10 to 20*.
